Experience

Frontend Developer

Relational Concepts

Responsible for front-end development for a custom real estate application which provides sophisticated and fully customizable filtering to allow investors and real estate professionals to narrow in on exact search targets.

- Designed mock-up screens, wireframes, and workflows for intuitive user experience.
- Migrated existing multi-page user experience into singular page interfaces using React components.
- Participated in every stage of the design from conception through development and iterative improvement.
- Produced user stories and internal documentation for future site development and maintenance.
- Implemented modern frameworks including Bootstrap and Font-Awesome to give the site an aesthetic overhaul.
- Managed all test deployments using a combination of Digital Ocean and Netlify.
- Produced unit tests using a combination of Mocha and Chai.; JavaScript, JQuery, React, HTML5 & CSS, Bootstrap, DOJO, Google Cloud, Bash Script

Product Development Engineer

Nov 2019 - Mar 2019 ()

Converted client's product needs into technical specs to be sent to the development team in Italy.

- Reorganized internal file server structure.
- Conducted remote / in person system integration and product demonstrations.
- Presided over internal and end user software trainings in addition to producing the corresponding documentation.
- Served as the primary point of contact for troubleshooting railroad hardware and software in the North America.
